

Exercise 3-3: `while` statement

17

■ `even_list.c`

- Create a program that displays all positive even numbers less than or equal to the input positive integer `a`.
- Example: Input: 13 → Output: “2 4 6 8 10 12”
- Implement using `while` statement

■ `even_list_loop.c`

- Modify `even_list.c` to create a program that allows you to repeatedly enter positive integers from the keyboard.
- Let the program terminate when entering a value of 0 (zero) or less.

(Note) If you cannot terminate the program, you can forcibly terminate it by pressing the ctrl key + ‘c’.
